Education

Andhra University College of Engineering

B.Tech + M.Tech Integrated (Computer Science & Engineering); CGPA: 8.45/10.0

Visakhapatnam, AP

2023 – 2029

Technical Skills

Languages: Java, Python, C, SQL

Web Technologies: HTML5, CSS3, JavaScript, React.js, REST APIs

Tools & Technologies: Git, GitHub, VS Code, MySQL, OpenCV, Computer Vision, NLP, LLM Integration

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

RoboCoupler Techno Solutions Pvt. Ltd.

Full Stack Developer Intern (AI-Integrated)

Visakhapatnam, AP

May 2025 – July 2025

- Developed RIA, an AI-powered voice assistant with 5+ features including wake-word activation (“Sam”), authentication, chat history, voice interaction, and guidance modules.
- Built responsive frontend components including animated voice interface, photo history management, and accessibility-focused interaction workflows.
- Implemented computer vision workflows supporting intruder detection, age-gender prediction, configurable detection thresholds, and timestamp-based detection history.

Projects

RIA Assistant | *Python, Flask, NLP, Speech Recognition, AI APIs*

- Built an AI voice assistant with 4+ interaction features including wake-word activation, speech input, text chat, and intelligent response generation.
- Developed modular assistant components for voice processing, conversation history, user guidance, and response handling.
- Integrated speech recognition, NLP processing, and AI APIs to enable natural language based user interactions.

FORGE – Execution Intelligence | *Next.js, React, TypeScript, Supabase*

- Developed a full-stack productivity platform with 4+ modules including authentication, task management, workflow tracking, and interactive dashboards.
- Implemented user-specific data handling using Supabase authentication and database integration.
- Built reusable React components and responsive interfaces for consistent layouts across application pages.

VisionSentinel – Intruder Detection System | *Python, OpenCV, Streamlit*

- Built a computer vision security system with 4+ features including face detection, intruder identification, age-gender prediction, and real-time monitoring.
- Implemented automated image capture workflows with adjustable detection thresholds and timestamp-based gallery organization.
- Created an interactive Streamlit dashboard with camera controls, detection history, and visual customization features.

Certifications & Achievements

- Full Stack Development Integrated with AI – RoboCoupler Techno Solutions
- Java Full Stack with React JS & AI – Brainovision Solutions
- Runner-Up – 48-Hour Front-End Build-a-thon
