Education

Andhra University College of Engineering

B.Tech + M.Tech Integrated (Computer Science & Engineering); CGPA: 8.45/10.0

Visakhapatnam, AP

2023 – 2029

Technical Skills

Languages: Java, Python, C, SQL

Web Technologies: HTML5, CSS3, JavaScript, React.js, REST APIs

Tools & Technologies: Git, GitHub, VS Code, MySQL, OpenCV, Computer Vision, NLP, LLM Integration

Core Concepts: Data Structures & Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Experience

RoboCoupler Techno Solutions Pvt. Ltd.

Full Stack Developer Intern (AI-Integrated)

Visakhapatnam, AP

May 2025 – July 2025

- Developed RIA, an AI-powered multilingual assistant integrating 3+ features including speech recognition, NLP-based query handling, and automation workflows.
- Built and improved AI-integrated application modules using frontend development, API integration, debugging, and deployment practices.
- Collaborated on full-stack development workflows using Git version control while designing modular and maintainable application components.

Projects

RIA Assistant | *Python, Flask, NLP, Speech Recognition, AI APIs*

- Built a multilingual AI voice assistant supporting multiple interaction modes including voice commands, text queries, and automated responses.
- Integrated NLP processing, AI APIs, and speech modules to handle user requests and generate intelligent responses.
- Designed modular architecture separating speech processing, command handling, and response generation components.

FORGE – Execution Intelligence | *Next.js, React, TypeScript, Supabase*

- Developed a full-stack productivity management platform with authentication, task management, workflow tracking, and interactive dashboards.
- Implemented user-specific data handling using Supabase database integration and authentication services.
- Built reusable React components and responsive interfaces to support consistent layouts across application pages.

VisionSentinel – Intruder Detection System | *Python, OpenCV, Streamlit*

- Built a computer vision security application integrating face recognition, intruder detection, and real-time monitoring features.
- Developed OpenCV-based image processing workflows for webcam-based detection and analysis.
- Created an interactive Streamlit dashboard for displaying detection outputs and monitoring results.

Certifications & Achievements

- Full Stack Development Integrated with AI – RoboCoupler Techno Solutions
- Java Full Stack with React JS & AI – Brainovision Solutions
- Runner-Up – 48-Hour Front-End Build-a-thon
